International Journal of Microwave and Millimeter-Wave Computer-Aided Engineering

Subject Index to Volume 4

Active antennas, 100
Active filter, 175
Active MMICs, 130
Anisotropic, 363
Anisotropic dielectrics, 184
Anisotropic substrate, 374
Antennas, 31, 230
ARGUS, SOS, 125
Arrays, 31, 58
Automatic non-uniform discretization, 384

Built-in test (BIT), 259

CAD, 50, 163, 248, 336
Characteristic current modes, 18
Circularly polarized wave, 43
Class-AB, 198
Computer-aided design, 374
Conformal mapping, 336
Convergence, 140
Coplanar waveguides, 111, 163
Crank-type antenna, 43

Design-for-test (DFT), 259
Design method, 198
Dielectric antennas, 230
Dielectric resonator antennas, 230
Dielectric substrate, 43
Dielectric waveguides, 184
Discrete complex image theory, 67
Disk-loaded waveguide, 125
Dispersion characteristics, 125, 184

Edge-fed, 31
Electromagnetic simulation, 219
E-plane, 31
Equivalent circuit, 50
Equivalent circuit of metal-semiconductor field-effect transistors (MESFET), 349
Equivalent circuits of the oscillators, 349
Expansion functions, 297

Fault modeling, 259
FDTD, 58
FD-FD method, 184
Field theory for the calculation of slot resonators, 349
Finite array, 18
Finite difference method, 111
Finite element method, 327
Full-wave, 31, 140
Full-wave SDA, 297

GaAsFET, 175
GaAs MESFET, 396
GaAs microstrip, 140
Guided wavelength, 43

Harmonic balance (HB), 349
High-efficiency, 198

Image theory, 67
Impedance transformers, 307
Interaction impedance, 125
Iterative technique, 43

Leaky-wave, 88
Linear array, 50
Low-noise FET, 396
Lumped element models, 148
Lumped element models for MMICs, 148

Metallic losses, 327
Method for oscillator development, 349
Method of moments, 76
Microstrip, 31, 248
Microstrip antenna, 58, 67
Microstrip circuit elements, 219
Microstrip discontinuities, 297, 384
Microstrip filters, 272
Microstrip patches, 18, 100
Microstrip tranmission line, 374
Microwave active filters, 130
Microwave CAD compatible models, 148
Microwave fault simulation, 259
Microwave and millimeter-wave integrated circuits, 219
MMIC SPICE Model, 175
Microwave techniques, 307
Millimeter-wave length, 327
Modeling, 248
Mode-matching, 88
Moments method, 18
Multilayer, 363
Mutual coupling, 31

Negative resistance, 130
Network, 31
NICs, 130
Nonlinear simulation, 100

Optimization, 396
Optimization routine, 327
Orthogonal array, 396
Oscillator with slot line resonator, 349

Pass-band filter, 327
Patch, 31
Pattern synthesis, 88
Phased array microstip antennas, 6
Power amplifier, 198
Printed antenna, 50, 88
Probe feed, 18

Quasi-analytical solution, 163
Quasi-static analysis of MICs, 111
Quasi-static characteristics, 336
Quasi-TEM, 363
Quasi-TEM analysis, 163

Return-loss, 31

Series-fed, 50
Shielded coplanar waveguides, 336
Simulation, 248
Small antennas, 230
Sommerfeld-type integral, 43, 67
Sonnet's EM, 140
Space domain, 18
Spectral domain, 363
Spectral domain method, 163
Statistical design, 282
Statistical model, 282
Stepped transmission-lines, 307
Stratified media, 67
Surface wave, 43

Tapered slot antennas, 76
Thick conductors, 363
Three-dimensional electromagnetic simulation, 384
Tolerance analysis, 31
Transmission-line, 31
Transmission line parameters, 140
Tuning, 175

Validation, 248
Verification, 248
